

Hunt Town

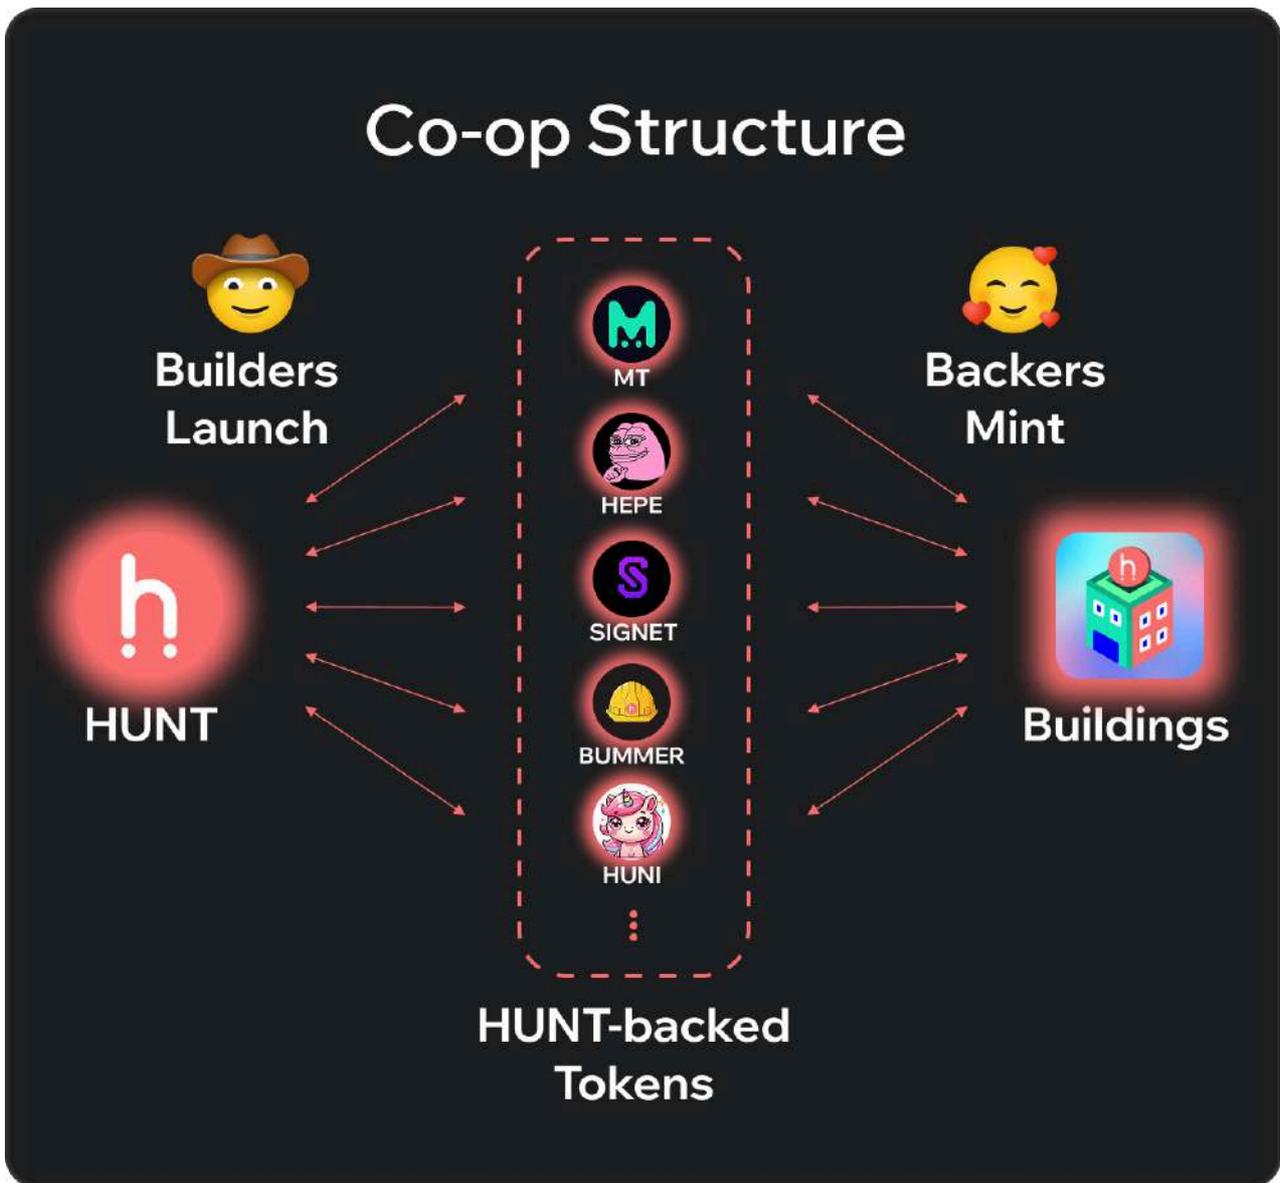

Introduction

What is [Hunt Town ↗](#)?

Hunt Town is the first onchain cooperative (Co-op) model for Web3 builders and backers. It's a shared economy where builders launch tokens and backers mint them daily, creating a sustainable onchain ecosystem that grows together. Every project in the Co-op is backed by HUNT, the reserve token that connects all tokens and NFTs within the Hunt Town economy.

The Co-op Model

Unlike traditional launchpads or isolated projects, Hunt Town connects all participants through a common reserve asset. As builders launch new tokens, a portion of HUNT becomes locked in bonding curve pools, while backers continuously mint and support projects with their daily Backing Points (BP). This structure naturally expands the Co-op's Total Value Locked (TVL) and strengthens HUNT's scarcity over time.

Builders and Backers

- Builders:** Launch project tokens backed by HUNT and raise liquidity through the Co-op economy.

Backers: Support these projects by minting tokens daily with their BP or donating HUNT directly. The relationship is mutually beneficial — builders gain early traction, and backers earn rewards, royalties, and recognition for their support.

Builders and Backers

Project Tokens on Hunt Town

Every project launched in Hunt Town issues its token as a HUNT-backed child token using bonding curve mechanics. When these project tokens grow in market activity, more HUNT becomes locked inside their bonding curve pools. This means that even though each builder runs a completely independent project, all of them share upside value across the Co-op. The success of one project strengthens the foundation of HUNT — and by extension, every other token and NFT built within the Hunt Town economy.

Launch a Project Token

Building NFTs

Backers in Hunt Town mint Building NFTs to increase their Backing Power, which determines how much support they can give to builders daily. Each Building NFT is backed by HUNT through its own bonding curve pool, locking more HUNT as demand for Buildings grows. Backers receive Daily BP (Backing Points) based on the number of Mini Buildings they hold, allowing them to mint their favorite project tokens each day. This creates a dynamic cycle — the more Buildings minted, the higher the Co-op's locked value and the stronger the collective economy becomes.

Building NFTs

The Role of HUNT

HUNT powers the Co-op economy as its reserve and deflationary asset. There is no inflation or minting — every project launch and NFT mint locks more HUNT into bonding curve pools, reducing circulating supply and amplifying long-term value for participants.

HUNT (ERC20)

HUNT as the Reserve Token

Why the Co-op Matters

Most Web3 projects start alone, struggling to build liquidity, attract users, or sustain activity. Hunt Town redefines that by linking every project within a shared economy — where success in one project contributes to the strength of all. Builders, backers, and the entire ecosystem grow together, creating a more resilient and connected onchain network.

HUNT-backed Project Tokens

How It Works

Builders and Backers

Builders
Launch project tokens backed by HUNT

- HUNT-backed bonding curve pools
- Gain early supporters
- Creator royalties and donation rewards

Backers
Mint Building NFTs for Backing Projects and Earn their Tokens

- Earn Daily Backing Points
- Earn project token rewards
- Community influence

The Co-op has two key participants:

Builders

- Launch project tokens that are backed by HUNT in their bonding curve pools.
- Gain early supporters who continuously mint their tokens using daily BP.
- Benefit from donation rewards, royalties, and visibility through the Co-op ecosystem.

Launch a Project Token

Backers

- Mint Building NFTs to increase their daily BPs (Backing Points).
- Earn Daily BP from their Buildings and use it to mint project tokens they support.
- Receive HUNT-backed token rewards and recognition through leaderboards and community ranks.

Daily Backing & Minting Flow

Daily Backing Point (BP)

The Co-op aligns both sides — builders gain reliable supporters, and backers accumulate ongoing value through their daily participation.

Launch a Project Token

Overview

Launching a project token on Hunt Town allows builders to create their own HUNT-backed tokens instantly through a simplified no-code interface. Each project token is deployed on Mint Club's bonding curve protocol, ensuring built-in liquidity, transparent pricing, and shared value alignment with the Co-op economy.

This process connects your project's growth directly to the HUNT ecosystem — as more users mint your token, more HUNT is locked in your bonding curve pool, contributing to Hunt Town's total TVL and reducing HUNT's circulating supply.

Launch your Co-op project

Create a new token with simple parameters. For full customization, use [Mint Club](#).

Name *

Symbol *

Max Supply *

100.00M tokens

Initial Market Cap (FDV) ⓘ *

229,973 HUNT (\$30,000)

Price Range: 0.002300 - 4.342450 HUNT

10%	25%	50%	75%	100%
27.44K (\$4K)	94.11K (\$12K)	382.33K (\$50K)	1.79M (\$234K)	26.18M (\$3M)

Logo (optional)

Upload Logo

Max 5MB. PNG, JPG, or GIF

Website (optional)

Distribution Plan (optional)

Creator's Comment (optional)

Step 1. Set Token Parameters

Before launch, builders define the basic parameters for their project token:

- Name: Your token's public name (e.g., Mint Token).
- Symbol: A unique ticker symbol (e.g., \$MT).
- Max Supply: The total number of tokens that can ever be minted.
- Logo (optional): Upload a project logo (up to 5MB in PNG, JPG, or GIF format).
- Website / Distribution Plan (optional): Add links for your project's homepage or token plan.
- Creator's Comment (optional): Leave a short introduction for backers about your project's goal or mission.

Step 2. Set Initial Market Cap (FDV)

The Initial Market Cap (FDV) determines your token's starting valuation and price curve. This value defines how your bonding curve starts — a higher FDV means a higher initial token price and deeper HUNT liquidity pool.

✔ **FDV = Initial Price × Max Supply**

You can select from three preset tiers or enter a custom value:

Tier	Description	Ideal For
Small	Lower starting price and tighter curve.	Early experiments and micro-projects.
Medium	Balanced curve between entry and growth.	Most Co-op builders.
Large	Higher starting liquidity and long-term potential.	Established or ambitious projects.

Step 3. Understand HUNT Accumulation

Each bonding curve requires HUNT accumulation as tokens are minted. This table shows the total HUNT needed to mint different percentages of your token supply.

- Initial Market Cap (FDV): Total market cap if all tokens were circulating at launch. Calculated as:
 $\text{Initial Price} \times \text{Max Supply}$ *It represents your token's starting valuation.*
- Accumulated HUNT required to mint: Total HUNT needed to mint each percentage of tokens. It shows how much HUNT must accumulate in the bonding curve pool to reach every minting milestone.

By adjusting FDV and supply, builders can design token models that fit their project's scale and sustainability goals.

Step 4. Launch Your Co-op Project

Once parameters are finalized, click Launch Co-op Project to deploy your token contract. Your project will immediately appear on the Hunt Town Co-op dashboard, where backers can start minting your tokens daily with their Backing Points (BP) or direct HUNT support.

Every new token launched expands the Co-op economy — locking more HUNT, driving deflationary growth, and strengthening the shared value network among all builders and backers.

Daily Backing & Minting Flow

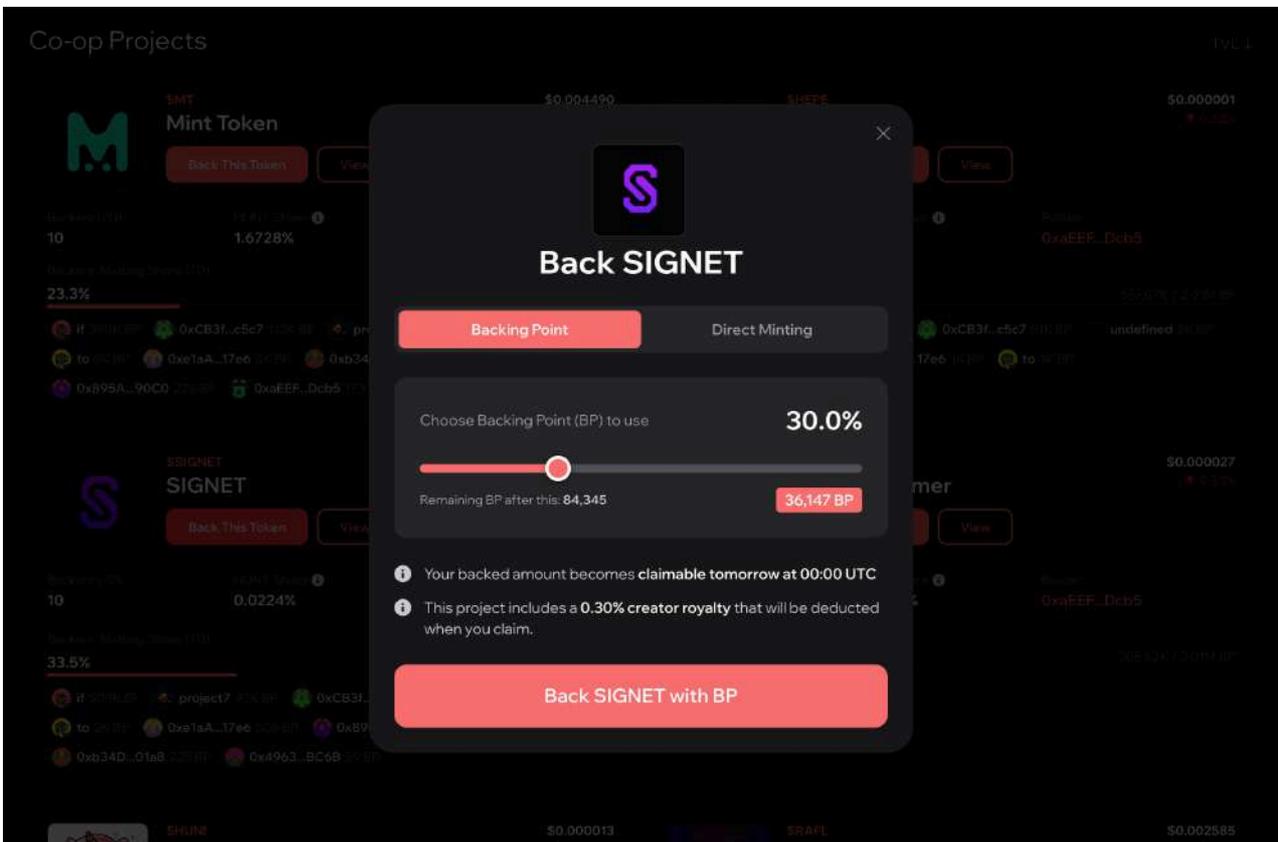

Each backer receives a set amount of Daily BP based on their Building NFT holdings. With these points, they can choose how to allocate their support among different projects on Hunt Town:

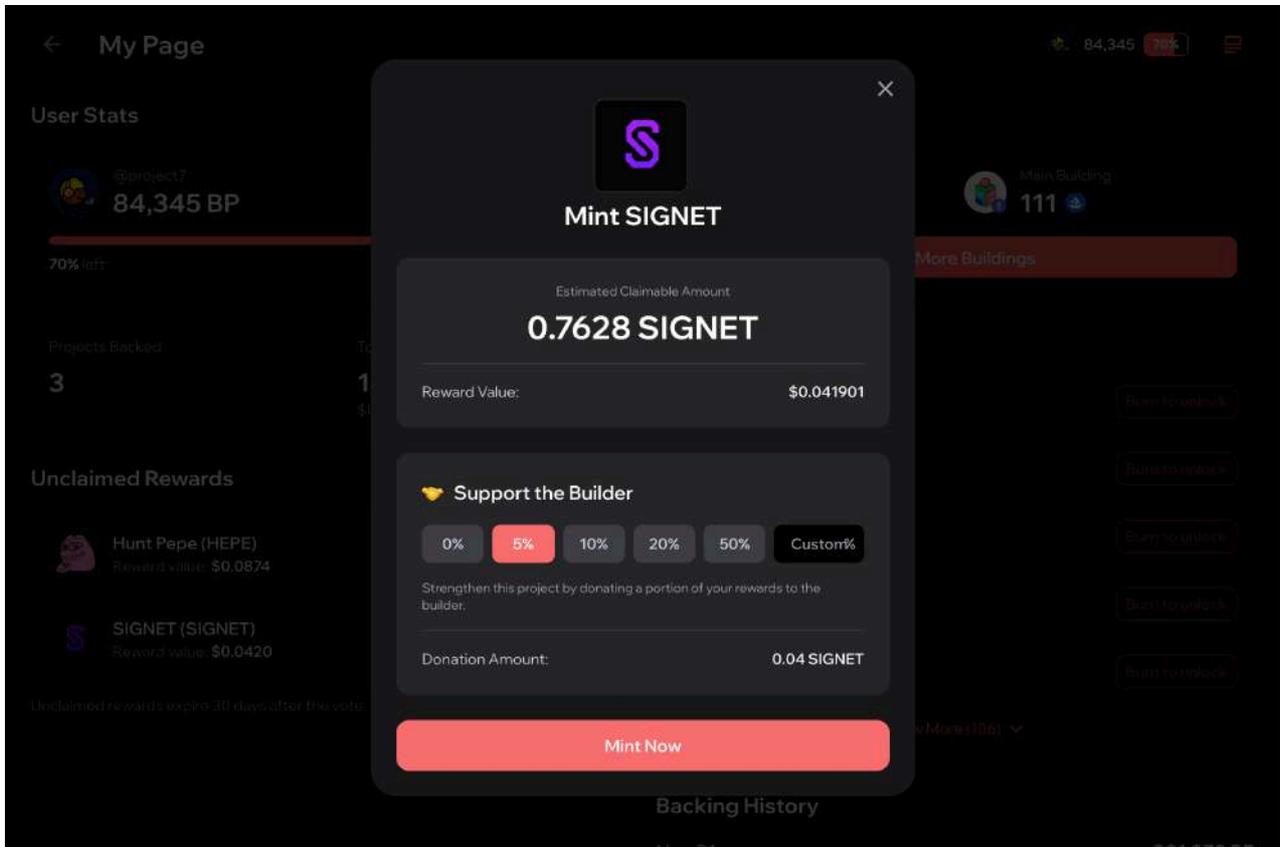

Select a project token to back.

Decide what percentage of BP to use and confirm your backing. You'll be able to claim your tokens the next day on My Page.

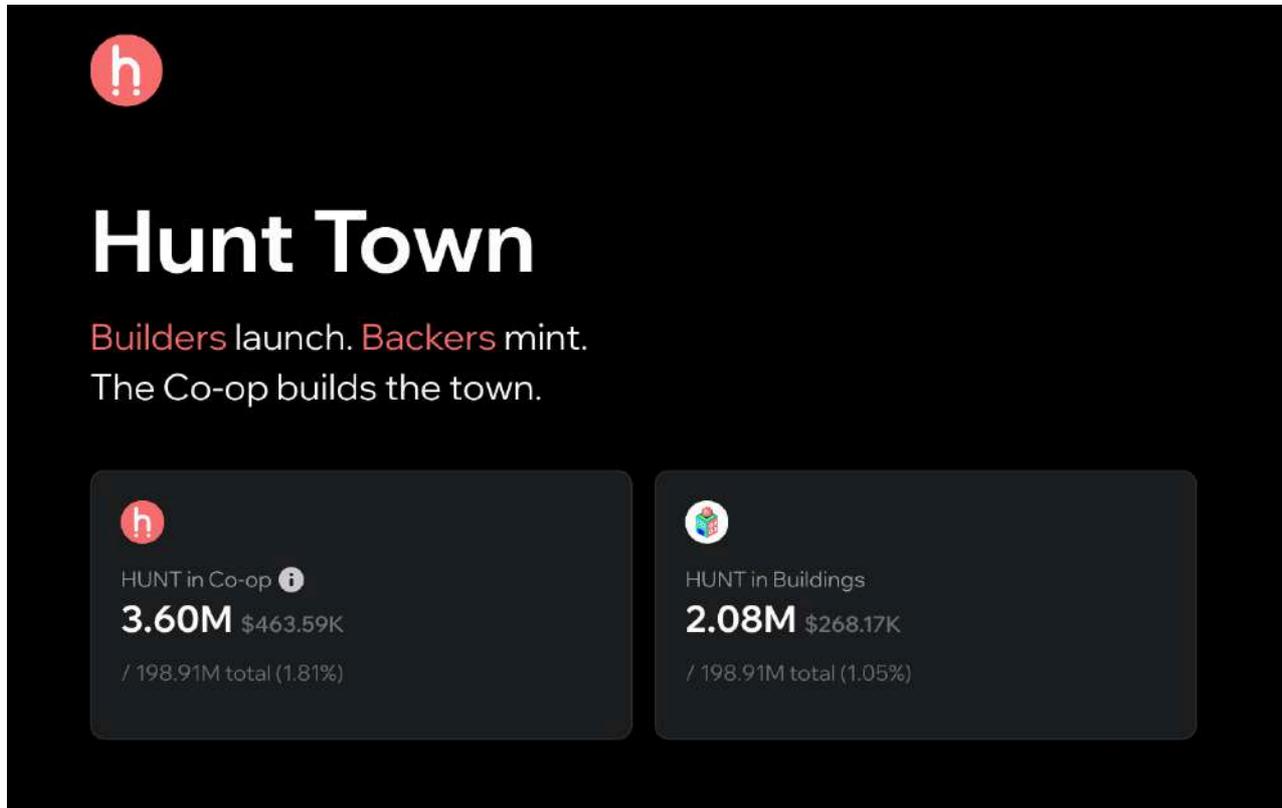

The next day, their backed amount becomes claimable. This creates a rhythm of daily engagement between backers and builders, driving organic growth and liquidity within the Co-op.

HUNT as the Reserve Token

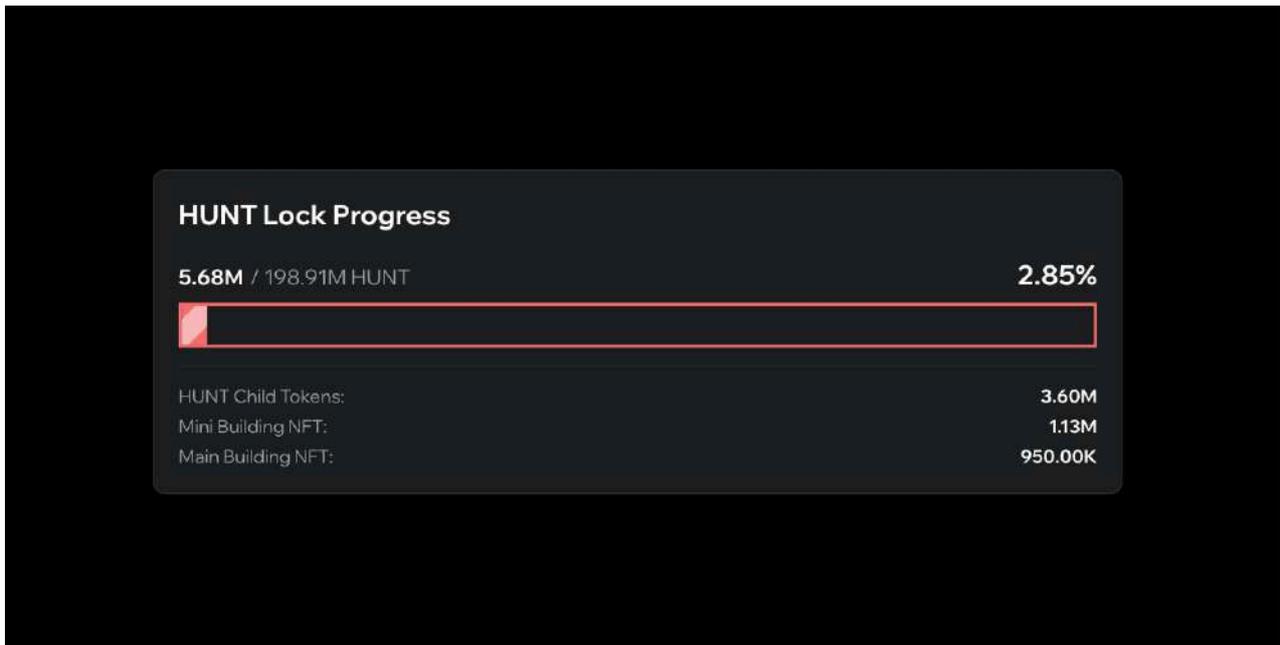

HUNT serves as the reserve asset that powers the entire Hunt Town economy. Every Building NFT and project token is connected to HUNT through its bonding curve pool, ensuring all assets share a unified foundation of value.

Instead of relying on external liquidity providers or emissions, the Co-op builds sustainable liquidity through HUNT-backed mechanics. As more projects launch and more Buildings are minted, additional HUNT is continuously locked, making the ecosystem stronger over time.

Deflationary Mechanism (HUNT Lock & TVL Growth)

HUNT has a fixed total supply, meaning no new tokens are ever minted. When builders launch new tokens or backers mint Buildings, the required reserve HUNT gets locked into bonding curves, reducing circulating supply.

This mechanism drives a natural deflationary effect: as the Co-op grows, more HUNT is removed from circulation, and the overall TVL (Total Value Locked) increases. The result is a self-reinforcing economy where participation not only supports builders but also enhances the long-term value of HUNT and the Co-op itself.

Daily Backing Point (BP)

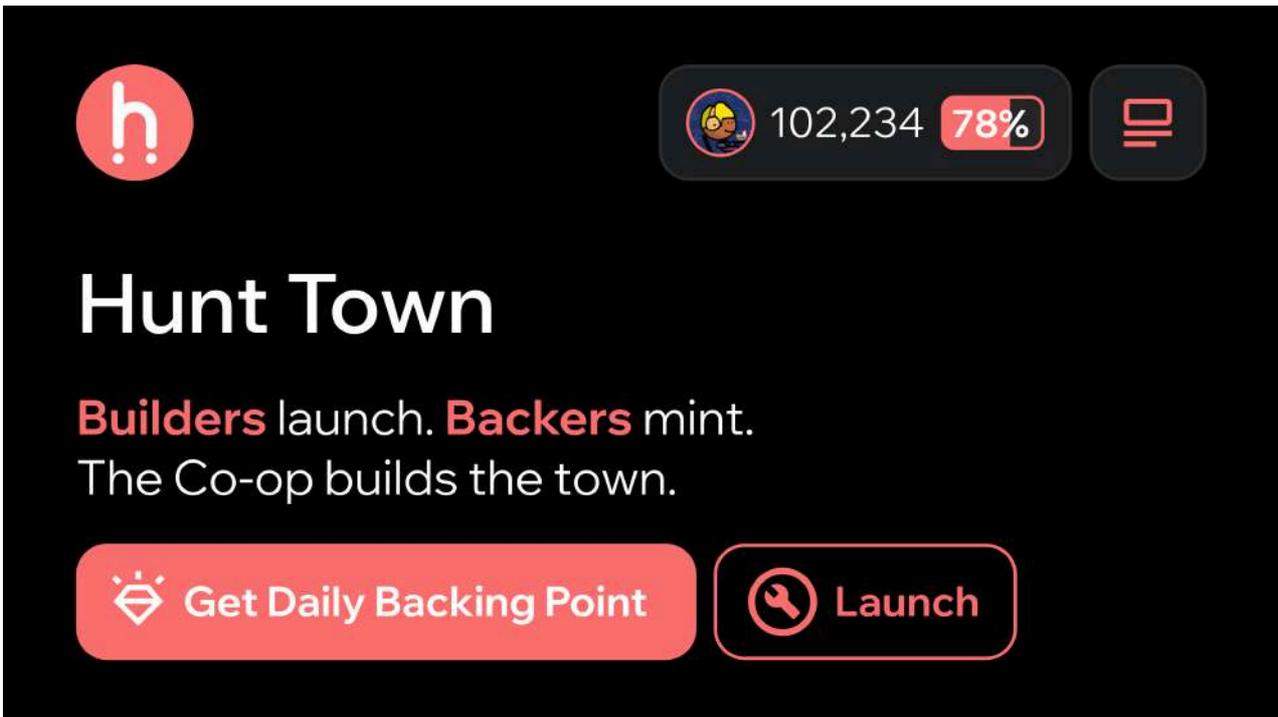

Daily Backing Points (BP) represent a backer's daily capacity to support projects within Hunt Town. Each backer receives a fixed amount of BP every 24 hours, determined by their Building NFT holdings and engagement level within the ecosystem.

	Main Building (Mainnet)	Mini Building (Base)
Daily BP to Earn	1000 BP	100 BP
Lock HUNT to Mint	1000 HUNT	100 HUNT
Lock-up Period	1 year	None
Burn Fee	0%	5%

Your total Daily BP is the sum of all three sources:

1. Number of **Main Buildings** (Mainnet, 1 per 1000 BP)
2. Number of **Mini Buildings** (Base, 1 per 100 BP)
3. **Bonus Points**: Free points automatically rewarded each day based on your onchain activity level and engagement within the Base and Farcaster ecosystem.

You can claim it once per day by pressing "Get Daily Backing Point" button, after which your available BP resets for the next cycle.

As your Building NFT holdings and engagement grow, so does your influence in the Co-op — giving you more power to back the builders you believe in.

Token & NFT

HUNT (ERC20)

HUNT is the native and reserve token of the Co-op. It acts as the foundational asset that backs every project token and Building NFT through bonding curve pools.

i The minting permission for HUNT tokens has been permanently removed, ensuring that no additional HUNT tokens can ever be minted in the future.

- Announcement: <https://x.com/steemhunt/status/1759454344548671803> ↗
- Transaction: <https://etherscan.io/tx/0x58e76d0d038da3f5648ad78122d1d9d01ce186d455fb7e9792a28b619654c226> ↗

Key Roles of HUNT:

- **Reserve Asset:** All tokens launched within Hunt Town are HUNT-backed, giving them intrinsic value.
- **Liquidity Source:** Each minting action locks more HUNT into bonding curves, strengthening the Co-op's overall TVL.
- **Deflationary Supply:** With a fixed total supply and no inflation, HUNT becomes scarcer as the ecosystem grows.

- **Shared Value Layer:** When one project gains traction, its bonding curve pool absorbs more HUNT—benefiting all Co-op participants by reducing circulating supply.

Base (Bridged)

Building NFTs: Membership and Backing Power of the Co-op

Building NFTs represent a backer's membership tier and long-term commitment within the Hunt Town Co-op. By minting a Building NFT, backers lock HUNT into the system and begin generating Daily Backing Points (BP), which are used to support and mint HUNT-backed project tokens.

There are two Building types:

- [Mini Building \(Base\)](#): Designed for accessibility and newcomers, generating a smaller daily BP amount with no lock-up.

- [Main Building \(Ethereum Mainnet\) ↗](#): Intended for committed backers, producing significantly higher daily BP with a one-year HUNT lock-up.

As more Buildings are minted, more HUNT is locked into the Co-op, directly reducing circulating supply. Buildings can be burned to unlock HUNT, but doing so permanently reduces future BP generation. This mechanism aligns influence, rewards, and long-term participation with the health of the overall economy, turning backers into true stakeholders rather than passive holders.

Building NFTs

HUNT-Backed Project Tokens: Shared Liquidity and Aligned Growth

Every project launched in Hunt Town issues its own HUNT-backed project token through a bonding curve. Each token has built-in liquidity, transparently priced and algorithmically managed, with HUNT held as the reserve asset in its pool.

Project tokens follow a continuous mint-and-burn model:

- Tokens are minted by depositing HUNT into the project's bonding curve pool, which locks HUNT as onchain liquidity.
- Tokens are burned when liquidity is withdrawn, releasing HUNT back from the pool.

This structure ensures that as individual projects grow, more HUNT is locked across the ecosystem. Rather than isolated token economies, Hunt Town operates as a single interconnected system where growth in one project strengthens the entire Co-op by increasing total value locked and reducing circulating HUNT supply.

HUNT-backed Project Tokens

Base HUNT: Expanding the Co-op to Layer 2

To support scalable participation and lower transaction costs, HUNT has been bridged from Ethereum mainnet to the Base network using Base's official L2StandardBridge. Bridged HUNT on Base maintains a 1:1 backing with mainnet HUNT and is recognized within the Optimism Superchain ecosystem.

Base HUNT enables:

- Lower-cost minting of Mini Building NFTs
- Broader participation from new backers
- Seamless integration with Base-native apps and liquidity venues

HUNT can be bridged between Ethereum and Base via standard bridging tools, with withdrawals back to mainnet subject to the usual L2 challenge period. By extending HUNT to Base, the Co-op preserves its economic guarantees while expanding accessibility and onchain activity across layers.

Base HUNT (Bridged)

Token Distribution

The initial HUNT token supply was [500 million](#) when it was first issued on the Ethereum network in 2019. Since then, the total supply of HUNT has been progressively reduced to support a more decentralised and sustainable token economy. To reach an optimal supply level and ensure long-term economic stability, over 60% of the initial HUNT supply was burned, resulting in a current total supply of 198,912,688 HUNT.

HUNT Token (HUNT)

Ethereum (ETH) Blockchain Explorer

Circulating Token Supply

- **198,912,688 HUNT (100% of total supply)**
- All vesting concluded in February 2022. As a result, the entire HUNT supply is fully circulating, with no official lock-ups remaining.
- The Business Development reserve is transparently held in a single onchain wallet ([0x842aDFAef2DE55Bb77bAeb54e57ba08862567E72 ↗](https://etherscan.io/address/0x842aDFAef2DE55Bb77bAeb54e57ba08862567E72)).
- Any transfers from this wallet for ecosystem development purposes are pre-announced to the community in advance.

Initial Token Supply (History)

A total of 500 million HUNT tokens were issued on the Ethereum network, with the initial distribution planned as follows:

- Ecosystem and community building airdrops - 250M (50%)
- Reserve for future business development - 100M (20%)
- Team members (2 year vesting) - 50M (10%)
- 1st round funding - 50M (10%)
- 2nd round funding - 50M (10%)

Changes in Token Supply (Burn Records)

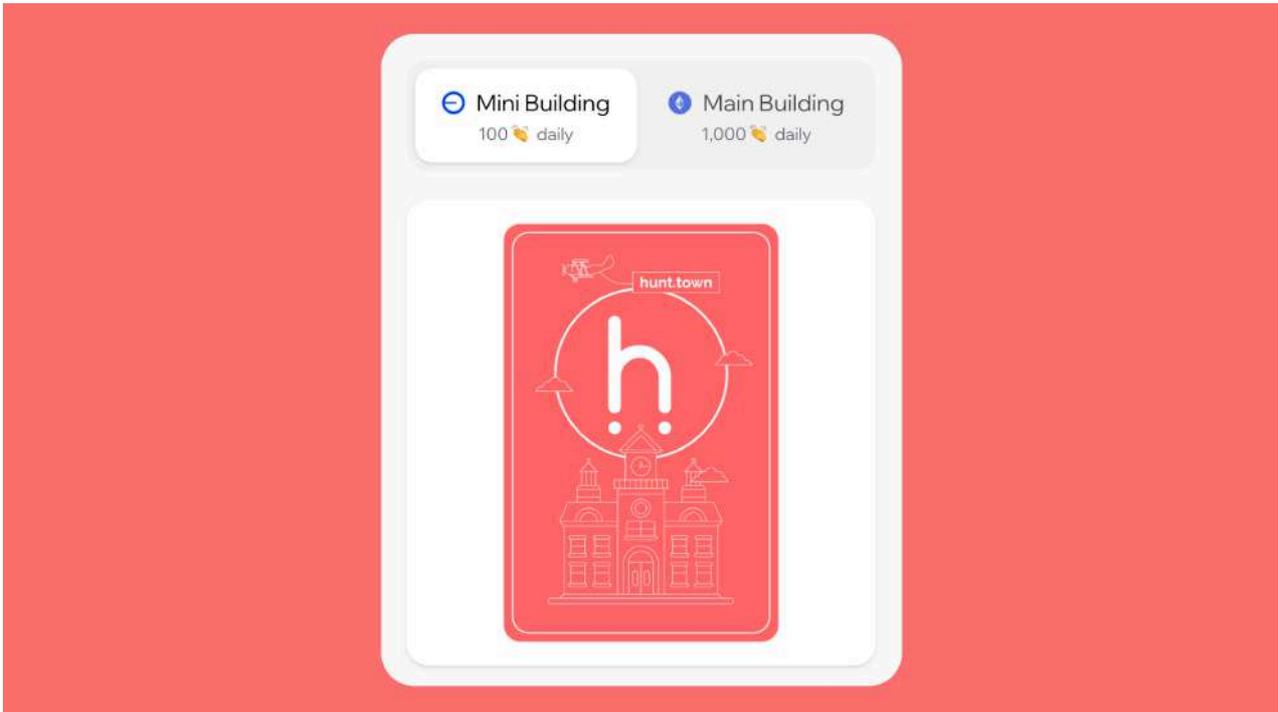

As noted above, over 60% of the initially issued HUNT supply was burned through the following events:

- Q1 2020, non-HUNT fee-based revenue: [1,311,205 HUNT ↗](#)
- End of ecosystem bounties: [186,578,670 HUNT ↗](#)
- Q2 2020, non-HUNT fee-based revenue: [1,868,664 HUNT ↗](#)
- Team allocation and 2nd round funding: [100,000,000 HUNT ↗](#)
- Q3 2020, non-HUNT fee-based revenue: [112,357 HUNT ↗](#)
- Q4 2020, non-HUNT fee-based revenue: [96,994 HUNT ↗](#)
- Q1 2021, non-HUNT fee-based revenue: [31,989 HUNT ↗](#)
- Community token swap from HUNT to MINT: [7,183,524 HUNT ↗](#)

- Team matching token swap from HUNT to MINT: [3,591,762 HUNT ↗](#)
- Q2 2021, non-HUNT fee-based revenue: [82,759 HUNT ↗](#)
- Q3 2021, non-HUNT fee-based revenue: [37,267 HUNT ↗](#)
- Q4 2021, non-HUNT fee-based revenue: [62,729.9 HUNT ↗](#)
- Q1 2022, non-HUNT fee-based revenue: [26,264 HUNT ↗](#)
- Q2 2022, non-HUNT fee-based revenue: [47,690 HUNT ↗](#)
- Q3 2022, non-HUNT fee-based revenue: [55,349 HUNT ↗](#)

After these burning events, the total circulating supply stands at 198,912,688 HUNT, all of which are fully vested.

Building NFTs

Building NFTs represent each backer's membership and contribution level within the Co-op. They are the source of Daily Backing Points (BP), enabling ongoing participation in project support and minting activities.

Building Types:

- **Mini Building (Base)**: Generates a small amount of daily BP, ideal for casual participants or newcomers.
- **Main Building (Mainnet)**: Offers higher BP output, suited for committed backers looking to scale their support power.

Differences between Main and Mini Building NFTs:

	Main Building NFT	Mini Building NFT
Network	Ethereum Main Net	Base Chain (L2)
Token Standard	ERC721	ERC1155
Required HUNT to mint	1,000 HUNT	100 HUNT
Lock-up period	1 year	None
Sell Royalty	None	5 HUNT
Daily BP to earn	1,000 BP / day	100 BP / day
Minting Page	Hunt Town ↗	Mint Club ↗
OpenSea	Main Building - OpenSea ↗	Mini Building - OpenSea ↗

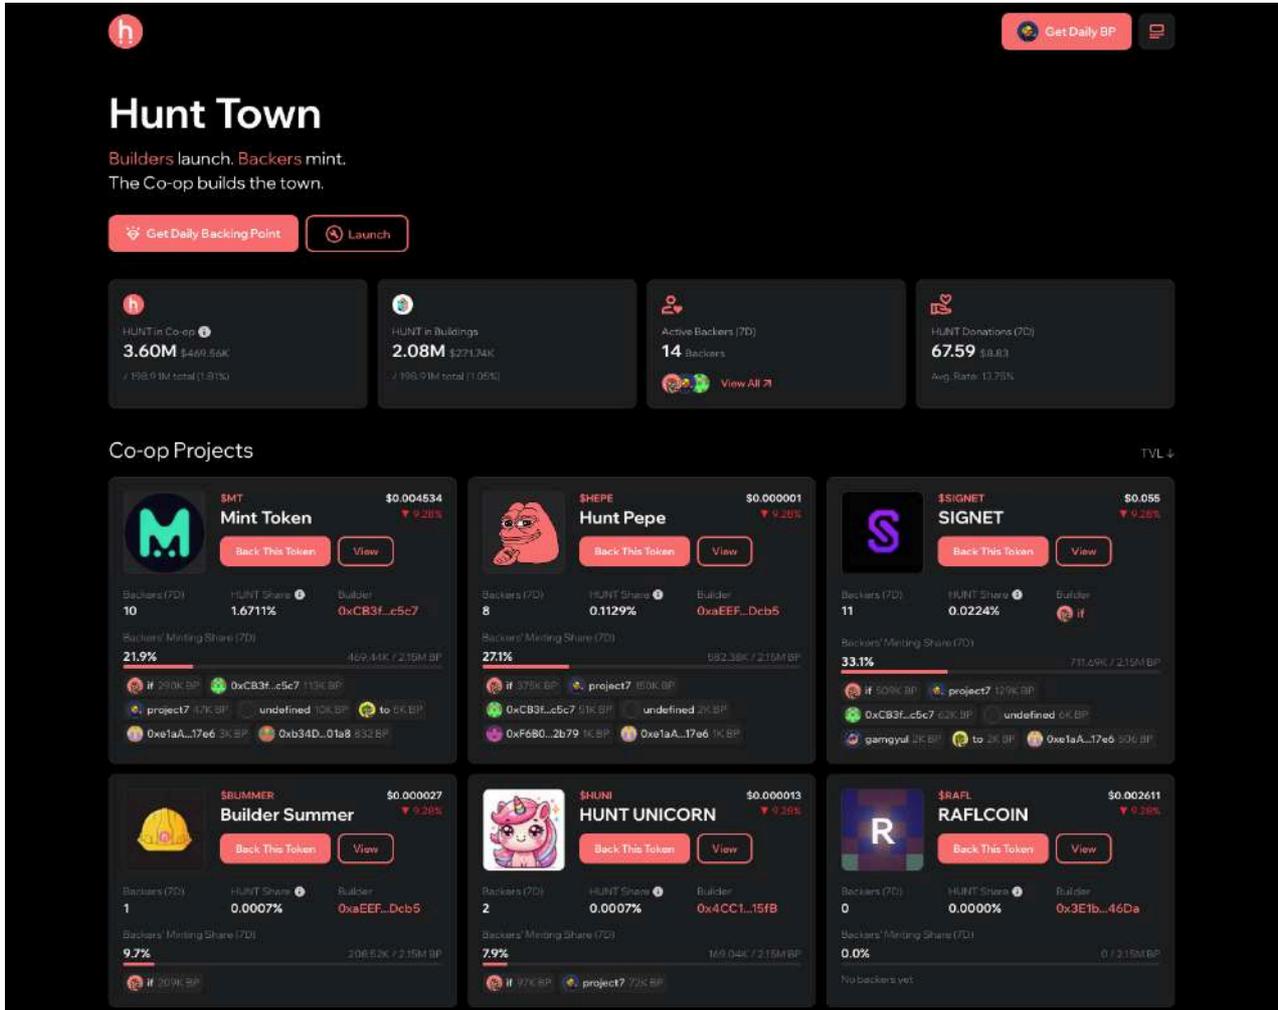

Core Mechanics:

- Minting a Mini Building locks HUNT into its bonding curve pool (or directly into the Townhall contract for the Main Building).
- The more Buildings you own, the more Daily BP you receive.
- Buildings can be burned to unlock HUNT, though doing so reduces your future BP generation.

Buildings transform backers into long-term stakeholders by tying their influence and rewards directly to the growth of the Co-op economy.

HUNT-backed Project Tokens

Each project launched in Hunt Town issues its own HUNT-backed token through a bonding curve contract. This mechanism ensures every project token has built-in liquidity and value alignment with HUNT.

Token Mechanics:

- Backed by HUNT: Each project’s bonding curve pool holds a reserve of HUNT.
- Continuous Minting & Burning: Tokens are minted when backers support a project and burned when liquidity is withdrawn.
- Upside Sharing: As projects grow and more HUNT is locked, the Co-op’s overall value increases—linking all builders and backers through shared success.

- **Transparent Market Dynamics:** Token prices and supply are determined algorithmically by bonding curves, preventing manipulation and ensuring predictable growth.

Ecosystem Synergy

Each layer of the Hunt Town economy—HUNT, Buildings, and Project Tokens—feeds into the others:

- Backers mint Buildings, generating BP.
- BP is used to mint Project Tokens, locking more HUNT.
- More locked HUNT increases TVL and reduces circulating supply, strengthening the token economy for all.

This interconnected structure ensures that Hunt Town operates not as a collection of isolated projects but as a single, expanding onchain cooperative economy.

Ecosystem

Mint Club Protocol Integration

Hunt Town's token economy is powered by the Mint Club Protocol, a protocol for creating token-backed tokens and NFTs through autonomous bonding-curve markets across multiple EVM chains. By building on Mint Club, every Hunt Town asset — including Building NFTs and project tokens — inherits powerful onchain liquidity and transparency features.

HUNT Backed Child Tokens

Mint Club

Key Integrations:

- **Bonding Curve Infrastructure:** Each project token and Building NFT is deployed through Mint Club's bonding curve smart contracts. This allows instant and permissionless minting and burning, while ensuring that every transaction automatically adjusts token prices according to supply and demand.
- **HUNT as the Reserve Asset:** In Hunt Town, the bonding curves use HUNT as the reserve token instead of a typical stablecoin or ETH. This design directly links each project's growth to the HUNT ecosystem, locking more HUNT as the Co-op expands.
- **Interoperable Liquidity Layer:** Because Mint Club supports 18+ EVM chains, Hunt Town's tokens remain fully interoperable and verifiable onchain. Builders can launch HUNT-backed tokens seamlessly, while backers gain transparent access to real-time price and liquidity data.
- **No-Code Tokenization Framework:** The Mint Club backend abstracts all smart contract complexity. Builders can launch tokens instantly without writing code, while maintaining decentralized control through immutable bonding curve logic.

How HUNT Powers Automated Onchain Liquidity

The bonding curve acts as an automated liquidity mechanism, with HUNT serving as the reserve asset for all project tokens in Hunt Town. Unlike traditional exchanges, there are no external market makers — every mint and burn transaction directly interacts with the curve.

In the graphs above (using a Large FDV example), the green line (FDV) shows the token's valuation growth, while the red line (Acc TVL) represents the total HUNT accumulated in the bonding pool.

At early stages, tokens mint cheaply as only small amounts of HUNT enter the pool. As supply increases, each new mint locks in more HUNT, pushing prices upward and deepening liquidity.

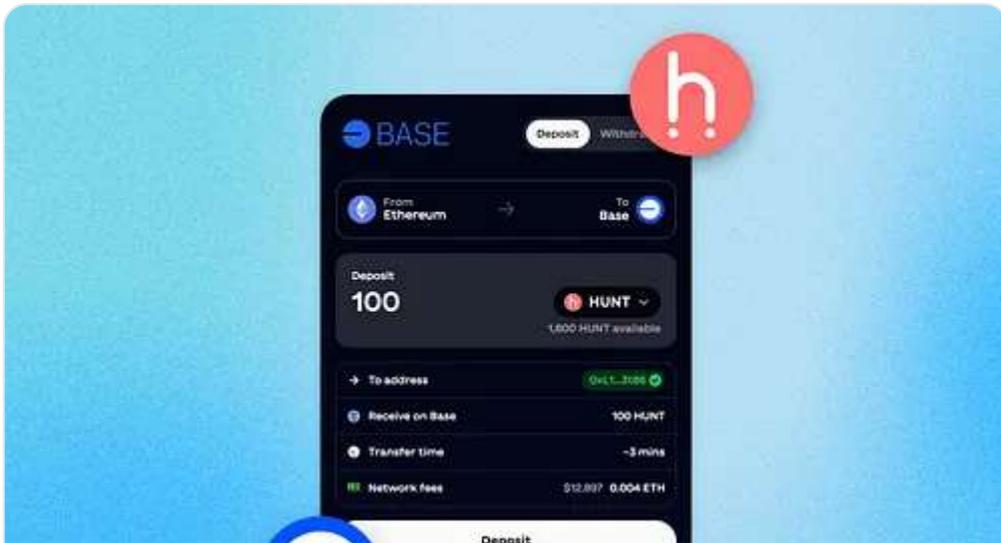

This creates a self-sustaining Co-op economy — every mint adds HUNT to the curve, every burn releases it, and the entire Hunt Town ecosystem benefits from continuously growing onchain liquidity.

In short, Mint Club serves as the financial engine behind Hunt Town's cooperative model —

providing a scalable, composable foundation where project tokens, NFTs, and HUNT all operate under one onchain liquidity system.

Base HUNT (Bridged)

HUNT token has expanded to the [Base Chain](#) by bridging the Ethereum main net-based HUNT tokens to Base Network as of April 24, 2024.

Expand HUNT to Base Chain, Bridge-to-Earn (10% Reward)

We are excited to announce plans to make HUNT available on the Base chain by bridging the Ethereum main net-based HUNT tokens to Base.

Hunt Town

24 April 2024

[Read on Substack](#)

https://news.hunt.town/p/expand-hunt-to-base-chain-bridge?r=qjk32&utm_campaign=post&utm_medium=web

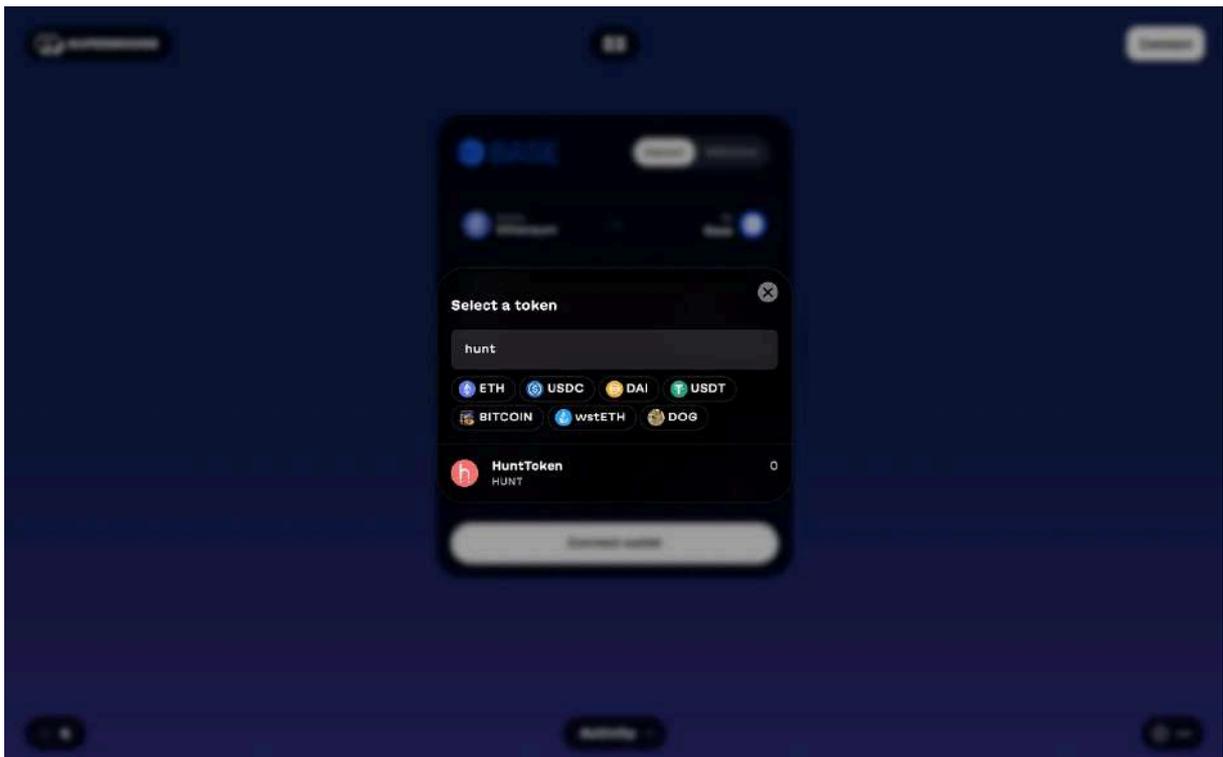

The HUNT token on the Base chain is established using Base's [L2StandardBridge](#) contracts, and the bridged token is now listed on the [Optimism Superchain Token List](#). HUNT holders can bridge their tokens from Ethereum to Base via platforms like [Superbridge](#). Withdrawals from Base back to Ethereum can take up to 7 days due to the challenge period.

Contract addresses:

- Ethereum: [0x9AAb071B4129B083B01cB5A0Cb513Ce7ecA26fa5](#)
- Base: [0x37f0c2915CeCC7e977183B8543Fc0864d03E064C](#)

How to Bridge HUNT via Superbridge

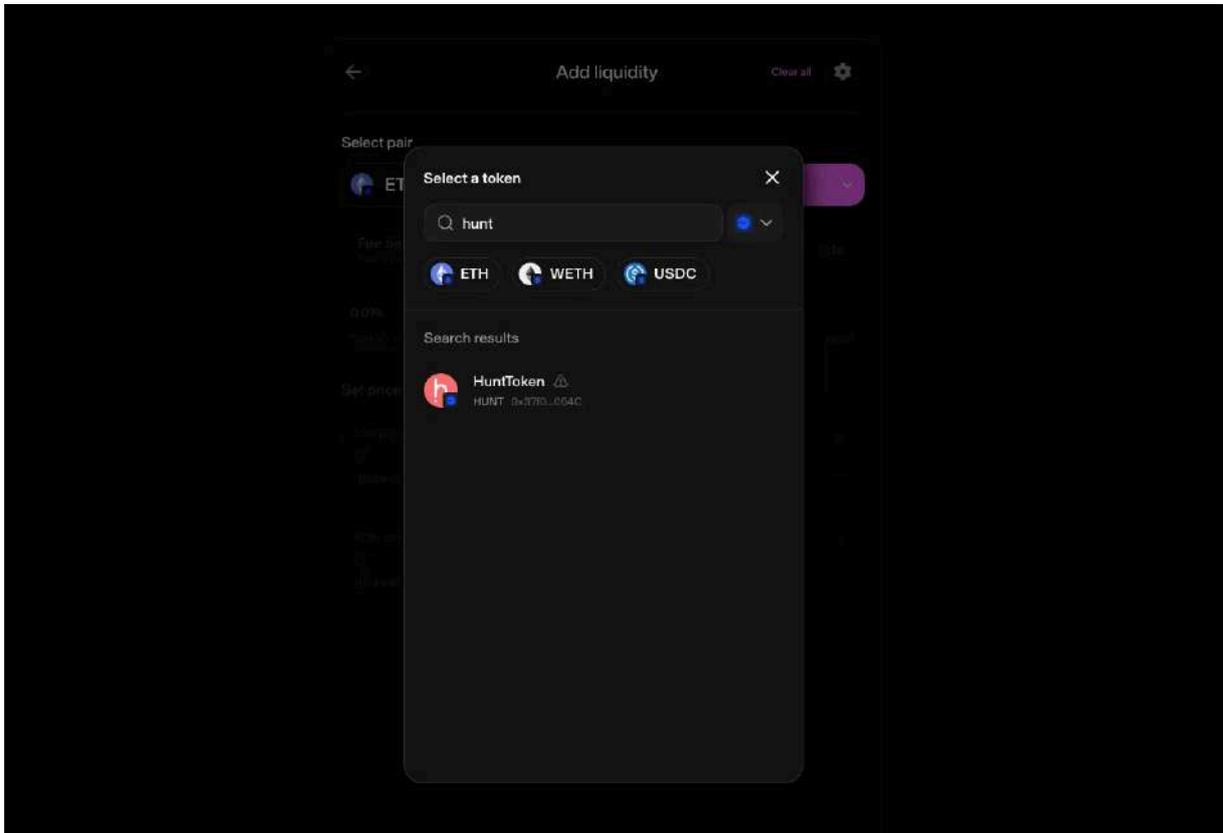

1. Go to Superbridge: <https://superbridge.app/base>
2. Search for the HUNT token.

3. Enter the amount of HUNT to send from Ethereum main net to Base.
4. Confirm the transaction.

How to Supply LP on Uniswap V3

1. Visit the Uniswap V3 pool tab: <https://app.uniswap.org/pool>
2. Click the 'New Position' button and search for the HUNT token (contract address - `0x37f0c2915CeCC7e977183B8543Fc0864d03E064C`).

3. Set your desired fee tier, price range, and the amount of HUNT and ETH or USDC to deposit.
4. Complete the process to supply LP.

⚠️ Note: Providing liquidity on a DEX exposes you to the risk of [impermanent loss](#) and to the [security risks](#) associated with the counterparty, specifically the Uniswap V3 protocol.

Hunt Tip & Monthly Grant on Farcaster

[Hunt Tip](#) is an innovative program on the Hunt Town platform, encouraging community engagement and development with HUNT tokens. It features a unique tipping and rewards system that supports a thriving ecosystem for web3 builders and participants.

Terms

Last Updated: November 21, 2025

These Terms constitute an agreement between you ("you," "user") and Hunt Town, operated by BourbonShake Inc. ("Core Team," "we," "us," or "our"), governing your access to and use of the Hunt Town website and decentralized application that provides access to onchain services on the Base Network and other supported chains (collectively, the "Site").

By accessing or using the Site, you acknowledge that you have read, understood, and agreed to these Terms in full. If you do not agree, you must stop using the Site immediately.

1. Overview

Hunt Town is an onchain cooperative (Co-op) that connects builders and backers through project tokens and Building NFTs backed by HUNT.

The Site provides access to decentralized smart contracts and community tools but does not custody user assets or directly execute onchain transactions.

2. Independent Projects & Disclaimers

- All project tokens launched within Hunt Town are independent, user-created projects.
- These tokens are not operated, controlled, or endorsed by the Hunt Town Core Team.
- The Core Team holds no legal, financial, or managerial responsibility for any project, token, or outcome that occurs within the Hunt Town ecosystem.
- Users are solely responsible for any actions, decisions, or losses incurred through interaction with project tokens.
- Always do your own research (DYOR) before backing or minting any token.

3. No Financial or Investment Advice

All information provided through Hunt Town (including websites, documentation, or community channels) is for educational and informational purposes only.

Nothing should be interpreted as financial advice, investment guidance, or solicitation to buy, sell, or hold any asset.

4. Onchain Interactions

Hunt Town operates as a peer-to-peer onchain platform. We do not:

- Store private keys or provide wallets.
- Intercept or reverse blockchain transactions.
- Guarantee smart contract functionality, network uptime, or transaction success.

Users must use third-party wallets and maintain sufficient network tokens (e.g., ETH, or Base ETH) to pay gas fees. All transactions are irreversible.

5. Use of HUNT Token

- HUNT is the core token used as the reserve asset for Building NFTs and project tokens launched within the Co-op.
 - Minting or burning any asset may lock or release HUNT within bonding curve contracts.
 - HUNT's value and market price are volatile, and you may lose part or all of your locked assets.
 - The Core Team provides no guarantees regarding HUNT's price, stability, or liquidity.
-

6. Building NFTs

- Building NFTs represent user participation and Backing Power in the Co-op.
 - Minting a Building NFT locks HUNT in its bonding curve pool (or Townhall contract for Main Buildings).
 - Once minted, NFTs and their associated HUNT reserves are governed solely by smart contract logic.
 - Burning or transferring NFTs may affect access to accumulated Backing Points (BP) or rewards.
-

7. Project Tokens

- Project tokens are HUNT-backed child tokens created by builders through bonding curve contracts.
 - Each project token is autonomous, and all parameters (FDV, Max Supply, tokenomics, etc.) are defined by the builder.
 - Hunt Town does not control or audit project performance or smart contract outcomes.
-

8. Mint Club Protocol Integration

Hunt Town operates on top of the Mint Club Protocol, a decentralized no-code bonding curve framework.

While Hunt Town provides the interface for interaction, all minting, burning, and pricing logic is executed by Mint Club smart contracts.

The Core Team has no administrative control over Mint Club's deployed contracts.

9. Bridged HUNT on Base

HUNT tokens bridged to the Base Network via the [L2StandardBridge ↗](#) contracts function as a representation of the original HUNT on Ethereum Mainnet. This bridge allows two-way transfers between Ethereum and Base using standardized Layer 2 bridging mechanisms.

The bridging process, including all related contracts (such as L2StandardBridge) and interfaces (e.g., [Superbridge ↗](#)), is fully operated by third-party protocols outside the control of the Hunt Town Core Team.

The Core Team:

- Does not operate, control, or maintain the bridge contracts or their interfaces.
- Is not responsible for any smart contract vulnerabilities, operational failures, or interface errors that may occur during bridging.
- Bears no liability for losses, delays, or token discrepancies arising from the bridge process.

Users are solely responsible for ensuring safe and correct use of the bridge when transferring HUNT between Ethereum and Base.

10. Risks

Using blockchain-based services involves risks including but not limited to:

- Smart contract bugs or exploits.
- Market volatility and token devaluation.
- Wallet loss or compromise.
- Network congestion, gas fee spikes, or failed transactions.

You acknowledge that the Hunt Town Core Team is not liable for losses resulting from these risks.

11. Intellectual Property

The Hunt Town name, logo, design elements, and related branding are property of BourbonShake Inc.

All user-generated projects retain ownership of their respective intellectual property.

12. Limitation of Liability

To the fullest extent permitted by law, the Core Team shall not be liable for any indirect, incidental, consequential, or special damages arising from:

- Use of or inability to use the Site or smart contracts.
- Interactions with third-party projects or tokens.
- Loss of assets, data, or profits.

Your sole remedy is to stop using the Site.

13. Amendments

These Terms may be updated or replaced at any time to reflect new features, regulatory requirements, or ecosystem changes.

Continued use of Hunt Town after revisions constitutes your acceptance of the updated Terms.
