*****   Compulink / BracketRaces.com   TruSTART   *****

Created by Compulink and Racers/Promoters Peter Biondo and Kyle Seipel, TruSTART is receiving rave reviews worldwide now.

Your Compulink StarTRAK Timing System can be   upgraded with the Patented and Trademarked TruSTART function.   This   creative function allows both RED lights on the Compulink Start Line Tree to be displayed if both competitors RED-Light.   Previous timing systems up to this point have always 'locked out' the second (faster car's) RED-Light in Eliminations if the first car (slower car) leaves too soon and RED-Lights. TruSTART will display RED Lights in BOTH lanes if both competitors do in fact leave early. The least RED-Light of the two will then determine the Winner of the race, equalizing the Start Line regardless of the cars' Dial-Ins. Instead of the slower car leaving with a RED-Light and it's 'Race Over', the second car now has to leave, at which time the actual GREEN/RED light status of both cars will be displayed, creating a level playing field for all competitors. In Beta tests at both of the Bracketraces.com Spring Flings in 2016,   the Halloween Classics at both Firebird Raceway in Boise and Norwalk, and late season Events at Bandimere, Racers and especially Announcers loved the new function. TruSTART has finally levelled the field, and also has added some excitement to Sportsman racing To schedule your Compulink for TruSTART mods, contact Bob at Compulink at 970 468-6484 or cell 970 376-1099

Run program TRU instead of normal program DRAG.   TruSTART can
be selected per Category in program CE, line 10.   If TruSTART is
NOT turned ON for a category, then that Category runs the same as
has always been the case. If TruSTART is turned ON for that
Category, then the Patented/Trademarked TruSTART mode will run in
that Category.   Full Tree ONLY. DO NOT RUN PRO Tree or SPLIT
TREE in TruSTART mode. Also note that the Reaction Times in
TruSTART mode start with the FIRST Amber, so a Racer can get up
to a -1.500 R/T.   Leaving earlier than the 1st Amber will result
in the R/T showing 'LB1A'. Non TruSTART mode still starts the R/T
at the 3rd Amber, and leaving before that will show a 'LB3A'.

Compulink TruSTART will display RED Lights for BOTH competitors
both in Time Trials and Eliminations. Time Trials/Qualifying
work the same as 'normal', with 2 exceptions ....

   1.. Announcer Screen and scoreboards will not display Reaction
       Times until BOTH Cars leave.

   2.. If one car leaves and the second car is 'late', the
       GREEN/RED status of the first car leaving will not reveal
       until the second car leaves.   The first leaving car will
       always count down AMBER, AMBER, AMBER, GREEN regardless of
       the actual GREEN/RED status of that car in order to hide a
       possible RED Light. Note that this is the same in both Time
       Trials and Eliminations. After both cars have left the
       Start Line, the actual GREEN/RED status of both cars will
       be shown.

Eliminations work the same as Time Trials/Qualifying as above.
Slower car will always count down AMBER, AMBER, AMBER, GREEN   in
order to hide a possible RED Light to the faster car.   When the
faster car leaves, both sides of the Tree will then display the
actual GREEN/RED status of each lane.   If two RED lights were
to occur, then the lesser of the two REDS will receive the
instant WIN Light.

Run scenarios ....

   2 Cars GREEN   Race as 'normal'
   1 Car   RED   Non-RED car receives the instant WIN
   2 cars RED   Lesser of the two REDS receives instant WIN

ENJOY !!!!!!!!!!!!   rev 06-22-20
