Initializing provider plugins...
- Checking for available provider plugins on https://releases.hashicorp.com...
- Downloading plugin for provider "azurerm" (1.25.0)...

The following providers do not have any version constraints in configuration,
so the latest version was installed.

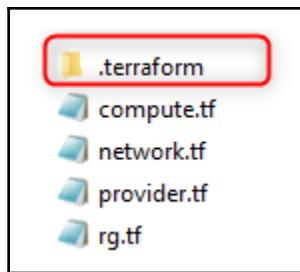

To prevent automatic upgrades to new major versions that may contain breaking
changes, it is recommended to add version = "..." constraints to the
corresponding provider blocks in configuration, with the constraint strings
suggested below.

* provider_azurerm: version = "~> 1.25"

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see
any changes that are required for your infrastructure. All Terraform commands
should now work.

If you ever set or change modules or backend configuration for Terraform,
rerun this command to reinitialize your working directory. If you forget, other
commands will detect it and remind you to do so if necessary.
```

```
:/mnt/d/DevOps/Learning-DevOps/CHAP02/terraform_separate_files$ terraform plan
Refreshing Terraform state in-memory prior to plan...
The refreshed state will be used to calculate this plan, but will not be
persisted to local or remote state storage.
```

```
-----  
An execution plan has been generated and is shown below.  
Resource actions are indicated with the following symbols:  
+ create
```

```
Terraform will perform the following actions:
```

```

Chapter 3: Using Ansible for Configuring IaaS Infrastructure

```
mikael@vmAnsible:~$ ansible --version
ansible 2.8.3
  config file = /etc/ansible/ansible.cfg
  configured module search path = [u'/home/mikael/.ansible/plugins/modules', u'/usr/share/ansible/plugins/modules']
  ansible python module location = /usr/lib/python2.7/dist-packages/ansible
  executable location = /usr/bin/ansible
  python version = 2.7.15+ (default, Oct  7 2019, 17:39:04) [GCC 7.4.0]
```

```
:~$ ansible --help
Usage: ansible <host-pattern> [options]

Define and run a single task 'playbook' against a set of hosts

Options:
  -a MODULE_ARGS, --args=MODULE_ARGS
                        module arguments
  --ask-vault-pass    ask for vault password
  -B SECONDS, --background=SECONDS
                        run asynchronously, failing after X seconds
                        (default=N/A)
  -C, --check          don't make any changes; instead, try to predict some
                        of the changes that may occur
  -D, --diff           when changing (small) files and templates, show the
                        differences in those files; works great with --check
  -e EXTRA_VARS, --extra-vars=EXTRA_VARS
                        set additional variables as key=value or YAML/JSON, if

Chapter 5: Managing Your Source Code with Git

Git 2.21.0 Setup

Select Components

Which components should be installed?

Select the components you want to install; clear the components you do not want to install. Click Next when you are ready to continue.

Additional icons

On the Desktop

Windows Explorer integration

Git Bash Here

Git GUI Here

Git LFS (Large File Support)

Associate .git* configuration files with the default text editor

Associate .sh files to be run with Bash

Use a TrueType font in all console windows

Check daily for Git for Windows updates

Current selection requires at least 246,5 MB of disk space.

<https://gitforwindows.org/>

Next >

Cancel

Git 2.21.0 Setup

Choosing the default editor used by Git

Which editor would you like Git to use?

Use Visual Studio Code as Git's default editor

(NEW!) [Visual Studio Code](#) is an Open Source, lightweight and powerful editor running as a desktop application. It comes with built-in support for JavaScript,

TypeScript and Node.js and has a rich ecosystem of extensions for other languages (such as C++, C#, Java, Python, PHP, Go) and runtimes (such as .NET and Unity).

Use this option to let Git use Visual Studio Code as its default editor.

<https://gitforwindows.org/>

[Next >](#)

[Cancel](#)

Git 2.21.0 Setup

Adjusting your PATH environment

How would you like to use Git from the command line?

Use Git from Git Bash only

This is the safest choice as your PATH will not be modified at all. You will only be able to use the Git command line tools from Git Bash.

Git from the command line and also from 3rd-party software

This option is considered safe as it only adds some minimal Git wrappers to your PATH to avoid cluttering your environment with optional Unix tools. You will be able to use Git from Git Bash, the Command Prompt and the Windows PowerShell as well as any third-party software looking for Git in PATH.

Use Git and optional Unix tools from the Command Prompt

Both Git and the optional Unix tools will be added to your PATH.

Warning: This will override Windows tools like "find" and "sort". Only use this option if you understand the implications.

<https://gitforwindows.org/>

Git 2.21.0 Setup

Choosing HTTPS transport backend

Which SSL/TLS library would you like Git to use for HTTPS connections?

Use the OpenSSL library

Server certificates will be validated using the ca-bundle.crt file.

Use the native Windows Secure Channel library

Server certificates will be validated using Windows Certificate Stores.

This option also allows you to use your company's internal Root CA certificates distributed e.g. via Active Directory Domain Services.

Git 2.21.0 Setup

Configuring the line ending conversions

How should Git treat line endings in text files?

Checkout Windows-style, commit Unix-style line endings

Git will convert LF to CRLF when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Windows ("core.autocrlf" is set to "true").

Checkout as-is, commit Unix-style line endings

Git will not perform any conversion when checking out text files. When committing text files, CRLF will be converted to LF. For cross-platform projects, this is the recommended setting on Unix ("core.autocrlf" is set to "input").

Checkout as-is, commit as-is

Git will not perform any conversions when checking out or committing text files. Choosing this option is not recommended for cross-platform projects ("core.autocrlf" is set to "false").

<https://gitforwindows.org/>

A screenshot of the Azure DevOps interface. The left sidebar shows 'BookDemo' selected. The main area shows a repository named 'BookDemo' with a file 'Readme.md'. A context menu is open at the top right, with the 'Import repository' option highlighted and a red circle with the number '3' on it. Other options in the menu include 'Filter repositories', 'New repository', and 'Manage repositories'. The top right also has a 'Search' bar and a 'Set up build' button.

The dialog box is titled 'Import a Git repository'. It features a truck icon and a 'Source type' dropdown set to 'Git'. The 'Clone URL' field contains the URL 'https://github.com/mikaelkrief/DemoAspNetApp.git', which is highlighted with a red box and a red circle with the number '1' on it. Below it is a 'Requires authorization' checkbox. The 'Name' field is filled with 'DemoAspNetApp'. At the bottom are 'Import' and 'Close' buttons, with a red circle and the number '2' on the 'Import' button.

Automate your release process in a few easy steps with a new pipeline

New pipeline 2

This screenshot shows the Azure DevOps Pipelines dashboard. On the left, a sidebar menu lists various features: Overview, Boards, Repos, Pipelines (selected), Builds, Releases (with a red notification badge '1'), Library, Task groups, Deployment groups, and Test Plans. The main area features a cartoon illustration of a person and a dog launching a rocket. Below the illustration, the text 'No release pipelines found' is displayed, followed by the sub-instruction 'Automate your release process in a few easy steps with a new pipeline'. A prominent blue button labeled 'New pipeline' is centered, with a red notification badge '2' above it.

The screenshot shows the GitLab welcome page. At the top, there is a navigation bar with the GitLab logo, a search bar, and user profile icons. Below the navigation bar, the main heading is "Welcome to GitLab" with the tagline "Code, test, and deploy together". The page is divided into four main sections, each with an icon and a title: "Create a project" (document icon), "Create a group" (two user icons), "Explore public projects" (globe icon), and "Learn more about GitLab" (lightbulb icon). Each section contains a brief description of its purpose.

Welcome to GitLab

Code, test, and deploy together

Create a project
Projects are where you store your code, access issues, wiki and other features of GitLab.

Create a group
Groups are the best way to manage projects and members.

Explore public projects
There are 1,259,593 public projects on this server. Public projects are an easy way to allow everyone to have read-only access.

Learn more about GitLab
Take a look at the documentation to discover all of GitLab's capabilities.

Welcome to GitLab

Code, test, and deploy together

Chapter 7: Containerizing Your Application with Docker

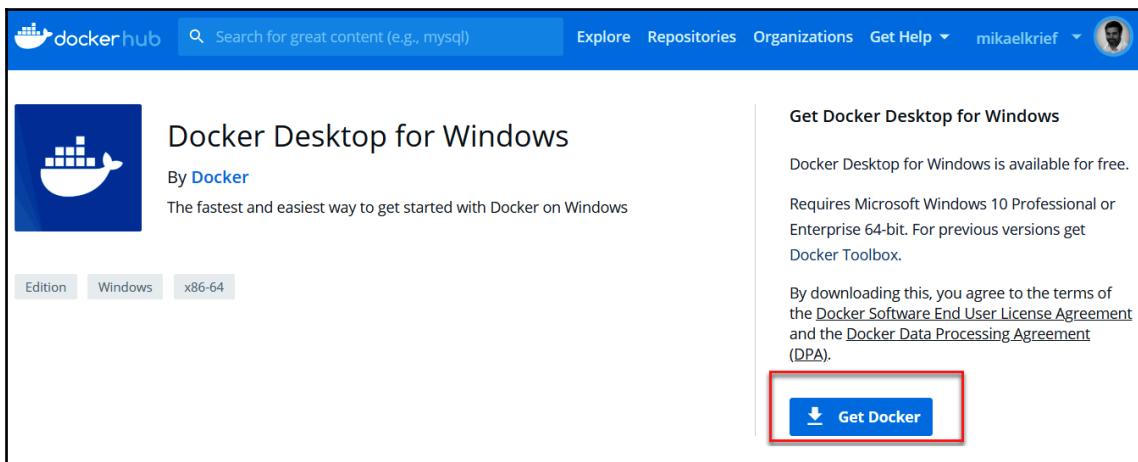

Docker Hub search results for **microsoft**:

- mono** (Updated 12 minutes ago): Mono is an open source implementation of Microsoft's .NET Framework. **OFFICIAL IMAGE** 
- Microsoft ASP.NET** (By Microsoft • Updated 14 minutes ago): Microsoft ASP.NET images. **VERIFIED PUBLISHER** 

Filters: Docker Certified (checked), Images (Verified Publisher, Official Images), Categories (Analytics, Application Frameworks, Application Infrastructure, Application Services).

Docker Desktop for Windows
By [Docker](#)
The fastest and easiest way to get started with Docker on Windows

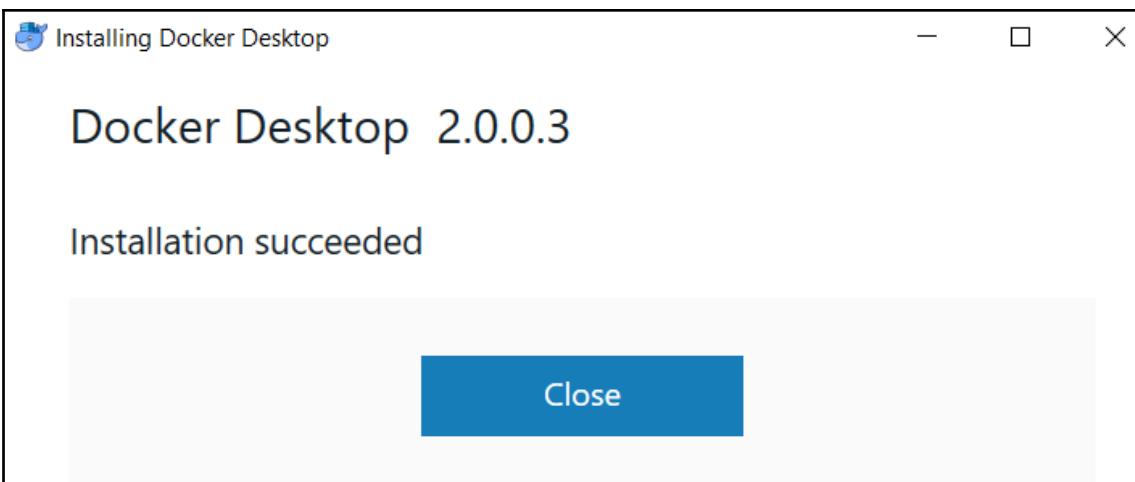

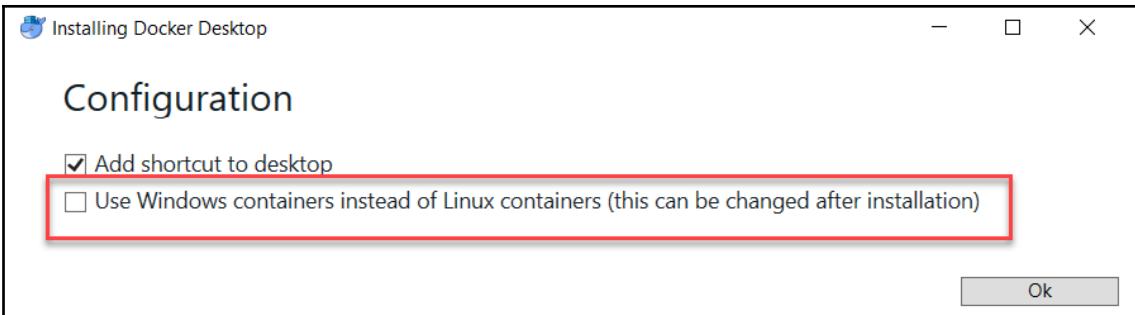

Edition Windows x86-64

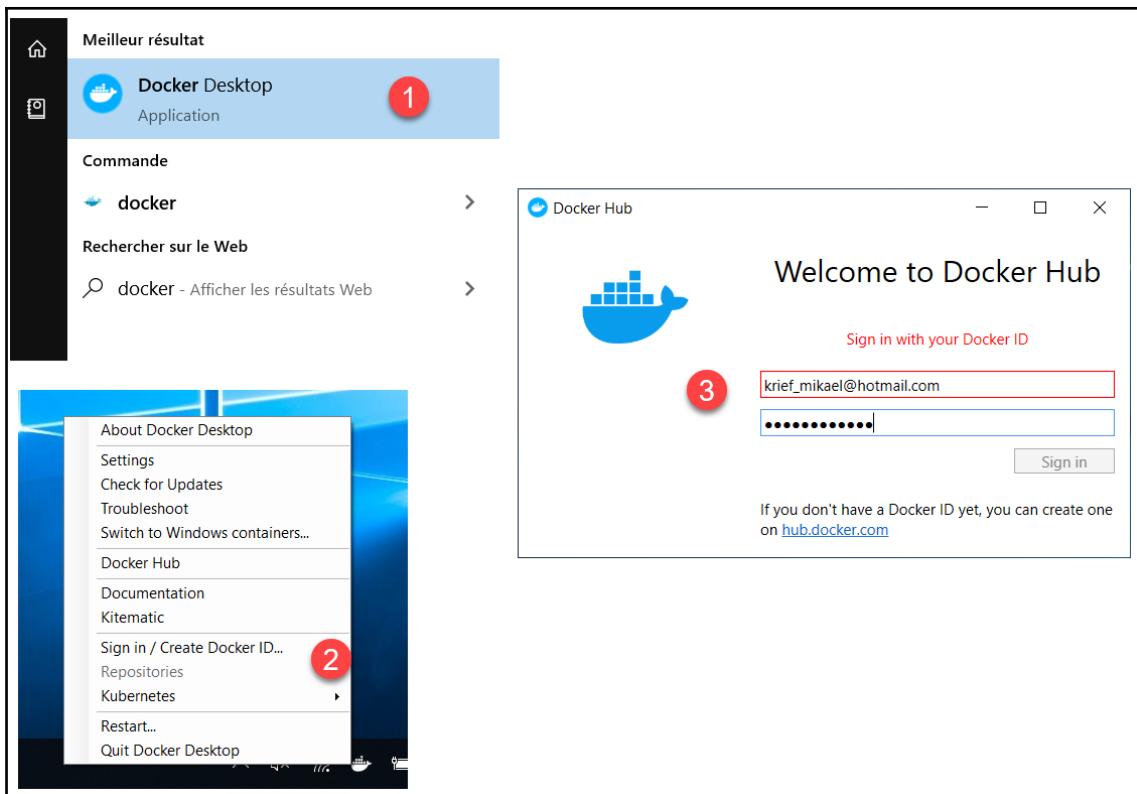

Get Docker Desktop for Windows

Docker Desktop for Windows is available for free. Requires Microsoft Windows 10 Professional or Enterprise 64-bit. For previous versions get Docker Toolbox.

By downloading this, you agree to the terms of the [Docker Software End User License Agreement](#) and the [Docker Data Processing Agreement \(DPA\)](#).

Get Docker

About Docker CE

Estimated reading time: 7 minutes

Docker Community Edition (CE) is ideal for developers and small teams looking to get started with Docker and experimenting with container-based apps. Docker CE has three types of update channels, **stable**, **test**, and **nightly**:

- **Stable** gives you latest releases for general availability.
- **Test** gives pre-releases that are ready for testing before general availability.
- **Nightly** gives you latest builds of work in progress for the next major release.

For more information about Docker CE, see [Docker Community Edition](#).

Releases

For the Docker CE engine, the open repositories [Docker Engine](#) and [Docker Client](#) apply.

Releases of Docker Engine and Docker Client for general availability are versioned using dotted triples. The components of this triple are `YY.mm.<patch>` where the `YY.mm` component is referred to as the year-month release. The version numbering format is chosen to illustrate cadence and does not guarantee SemVer, but the desired date for general availability. The version number may have additional information, such as beta and release candidate qualifications. Such releases are considered "pre-releases".

```
\Mikael>docker --help

Usage: docker [OPTIONS] COMMAND
       A self-sufficient runtime for containers

Options:
  --config string      Location of client config files (default
                      "C:\\Users\\Mikael\\.docker")
  -D, --debug          Enable debug mode
  -H, --host list      Daemon socket(s) to connect to
  -l, --log-level string
                      Set the logging level
                      ("debug"|"info"|"warn"|"error"|"fatal")
                      (default "info")
  --tls                Use TLS; implied by --tlsverify
  --tlscacert string  Trust certs signed only by this CA (default
                      "C:\\Users\\Mikael\\.docker\\ca.pem")
  --tlscert string    Path to TLS certificate file (default
                      "C:\\Users\\Mikael\\.docker\\cert.pem")
  --tlskey string     Path to TLS key file (default
                      "C:\\Users\\Mikael\\.docker\\key.pem")
  --tlsverify          Use TLS and verify the remote
  -v, --version         Print version information and quit

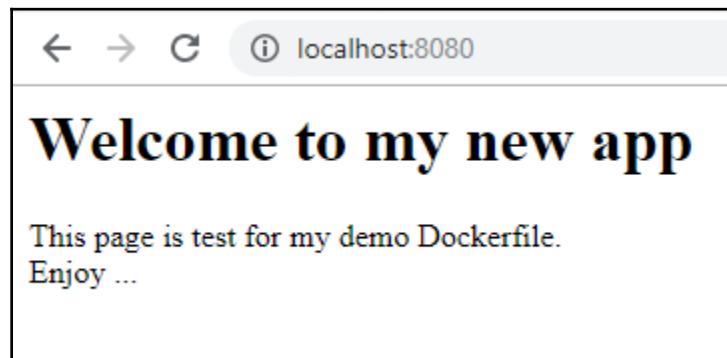

Management Commands:
  builder      Manage builds
  config       Manage Docker configs
  container    Manage containers
  image        Manage images
  network     Manage networks
  node         Manage Swarm nodes
  plugin      Manage plugins
  secret       Manage Docker secrets

```
PS C:\Users\Mikael> helm --help
The Kubernetes package manager

To begin working with Helm, run the 'helm init' command:

$ helm init

This will install Tiller to your running Kubernetes cluster.
It will also set up any necessary local configuration.

Common actions from this point include:

- helm search:      search for charts
- helm fetch:       download a chart to your local directory to view
- helm install:     upload the chart to Kubernetes
- helm list:        list releases of charts
```

```
PS C:\> helm init
Creating .\helm
Creating .\helm\repository
Creating .\helm\repository\cache
Creating .\helm\repository\local
Creating .\helm\plugins
Creating .\helm\starters
Creating .\helm\cache\archive
Creating .\helm\repository\repositories.yaml
Adding st https://kubernetes-charts.storage.googleapis.com
Adding local repo with URL: http://127.0.0.1:8879/charts
$HELM_HOME has been configured at F\.helm.

Tiller (the Helm server-side component) has been installed into your Kubernetes Cluster.

Please note: by default, Tiller is deployed with an insecure 'allow unauthenticated users' policy.
To prevent this, run 'helm init' with the --tiller-tls-verify flag.
For more information on securing your installation see: https://docs.helm.sh/using_helm/#securing-your-helm-installation
```

Kubernetes Service

Kubernetes Service Saved

Create

1

Azure Kubernetes Service is the quickest path from zero to Kubernetes on Azure. This new service features an Azure-hosted control plane, automated upgrades, self-healing, easy scaling, and a simple user experience for both developers and cluster operators. With AKS, customers get the benefits of open source Kubernetes without complexity or operational overhead.

2

Subscription: DEMO

Resource group: (New) demoBookAKS

Create new

CLUSTER DETAILS

Kubernetes cluster name: demoBookAKS

Region: (Europe) West Europe

Kubernetes version: 1.12.8 (default)

DNS name prefix: demoBookAKS-dns

PRIMARY NODE POOL

The number and size of nodes in the primary node pool in your cluster. For production workloads, at least 3 nodes are recommended for resiliency. For development or test workloads, only one node is required. You will not be able to change the node size after cluster creation, but you will be able to change the number of nodes in your cluster after creation. If you would like additional node pools, you will need to enable the "X" feature on the "Scale" tab which will allow you to add more node pools after creating the cluster. [Learn more about node pools in Azure Kubernetes Service](#)

Node size: Standard DS2 v2

2 vcpus, 7 GiB memory

Change size

Node count: 3

```
C:\> az aks get-credentials --resource-group Rg-AKS --name demoBookAKS

Chapter 9: Testing APIs with Postman

The screenshot shows a user interface for managing collections. At the top, there are buttons for 'New' (orange), 'Import', 'Runner', and a settings icon. Below the header, there are tabs for 'History', 'Collections' (which is selected, indicated by an orange underline), and 'APIs BETA'. A search bar with a 'Filter' placeholder is also present. On the right, there are buttons for '+ New' and '...'.

The main content area displays a collection named 'DemoBook' with a red star icon, indicating it is a favorite. It shows '2 requests'. To the right of the collection name are a 'More' button (with a red '1' badge) and a 'Trash' button.

A context menu is open for the 'DemoBook' collection, listing the following options:

- Share Collection
- Manage Roles
- Rename (with keyboard shortcut Ctrl+E)
- Edit
- Create a fork
- Merge changes
- Add Request (highlighted with a red '2' badge)
- Add Folder

SAVE REQUEST

Requests in Postman are saved in collections (a group of requests).

The image shows two side-by-side application windows: Postman on the left and Collection Runner on the right. Both windows have a red circle with a number (1, 2, 3, or 4) in the top right corner, indicating specific points of interest.

Postman (Left Window):

- Header:** Postman, File, Edit, View, Help, + New, Import, Runner, +
- Toolbar:** Filter (with a red circle 1), History, Collections (underlined), APIs BETA, + New Collection, Trash.
- Content:** DemoBook (with a star icon) containing 2 requests.

Collection Runner (Right Window):

- Header:** Collection Runner, File, Edit, View, Help.
- Search:** Search for a collection or folder.
- Collection List:** DemoBook (with a red circle 2).
 - GET Get all posts
 - GET Get a single post
- Run Configuration:**
 - Environment: Local (with a red circle 3).
 - Iterations: 1
 - Delay: 0 ms
 - Log Responses: For all requests (with a red circle 4).
 - Data: Select File
 - Keep variable values (with an info icon)
 - Run collection without using stored cookies (with an info icon)
 - Save cookies after collection run (with an info icon)
- Run Button:** Run DemoBook (blue button with a red circle 4).

The screenshot shows the Collection Runner interface. At the top, there are buttons for 'Collection Runner', 'Run Results', 'My Workspace', 'Run In Command Line', and 'Docs'. Below this, a summary shows '4 PASSED' and '0 FAILED'. The collection name is 'DemoBook' and it was run 'just now'. There are buttons for 'Run Summary', 'Export Results', 'Retry', and 'New'. The main area displays 'Iteration 1' with two requests: 'GET Get all posts' and 'GET Get a single post'. The 'GET Get all posts' request is successful (200 OK, 76 ms, 27.52 KB). The 'GET Get a single post' request is also successful (200 OK, 27 ms, 288 B). Each request has four test cases: 'Status code is 200', 'Response time is less than 400ms', 'Json response is not empty', and 'Json response userId eq 1', all of which passed.

Chapter 10: Static Code Analysis with SonarQube

SonarQube Certified by Bitnami

Bitnami

[Create](#)

[Start with a pre-set configuration](#)

Want to deploy programmatically? [Get started](#)

[Save for later](#)

SonarQube is an open source tool for continuous code quality which performs automatic reviews of code to detect bugs, code smells and vulnerability issues for 20+ programming languages such as Java, C#, JavaScript, C/C++ and PHP. It tracks statistics and creates charts that enable developers to quickly identify problem areas in their code.

SonarQube is a proprietary trademark belonging to SonarSource SA. SonarSource SA creates solutions for code quality: SonarQube, SonarCloud, and SonarLint, as well as their own code analyzers and governance solutions.

Why use Bitnami Certified Apps?

Bitnami certified images are always up-to-date, secure, and built to work right out of the box.

Bitnami packages applications following industry standards, and continuously monitors all components and libraries for vulnerabilities and application updates. When any security threat or update is identified, Bitnami automatically repackages the applications and pushes the latest versions to the cloud marketplaces.

The screenshot shows the Azure portal interface for a virtual machine named 'demo-sonar'. The left sidebar has a 'Run command' button and sections for 'Monitoring' (Insights (preview), Alerts, Metrics, Diagnostic settings, Advisor recommendations) and 'Support + troubleshooting' (Resource health, Boot diagnostics, Reset password, Redeploy). The 'Boot diagnostics' item is highlighted with a red box and a green circle containing the number '1'. The main content area is titled 'Boot diagnostics' and shows a 'Screenshot' and 'Serial log' tab. The 'Serial log' tab is selected and highlighted with a green circle containing the number '2'. The log content is as follows:

```

SonarLint for Visual Studio Code

SonarLint is an IDE extension that helps you detect and fix quality issues as you write code. Like a spell checker, SonarLint squiggles flaws so they can be fixed before committing code. can get it directly from the VS Code Marketplace and it will then detect new bugs and quality issues as you code (JavaScript, TypeScript, PHP and Python)

How it works

Simply open a JS, TS, Python or PHP file, start coding, and you will start seeing issues reported by SonarLint. Issues are highlighted in your code, and also listed in the 'Problems' panel.

SonarLint 1

Configure one or more connection(s) to SonarQube/SonarCloud. For security reasons, the token should not be stored in SCM with workspace settings. The `serverId` can be any identifier and will be referenced in [Sonarlint > Connected Mode: Project](#).

Path to a JRE (8 or more recent) used to launch the SonarLint Language Server.

On Windows, backslashes must be escaped, e.g. `C:\\Program Files\\Java\\jdk1.8.0_161`

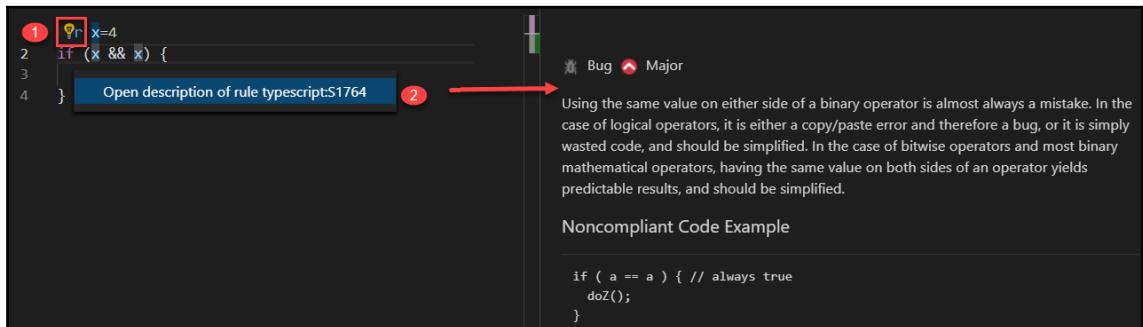

C:\\Program Files\\Java\\jre1.8.0_221 2

```
1 var x=4
2 if (x && x)
3
4 }
```

Correct one of the identical sub-expressions on both sides of operator "&&"
(typescript:S1764) sonarlint(typescript:S1764)

Quick Fix... Peek Problem

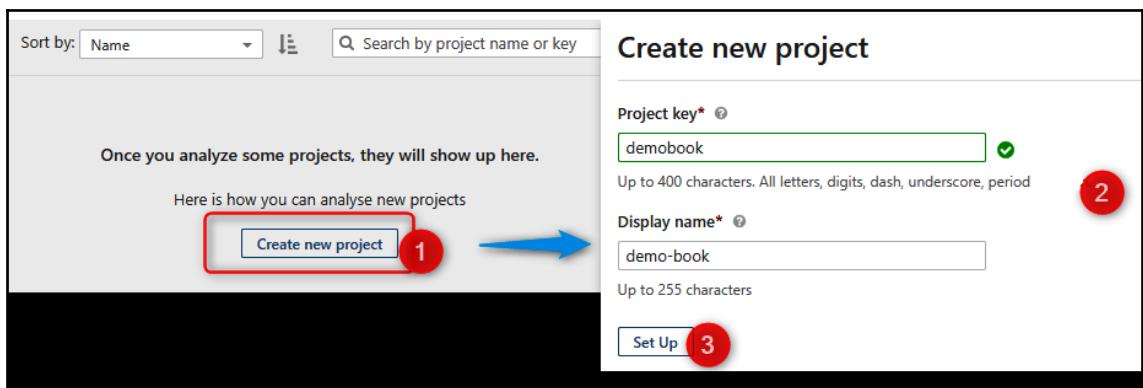

```
1 var x=4
2 if (x && x) {
3
4 }
```

Open description of rule typescript:S1764

Using the same value on either side of a binary operator is almost always a mistake. In the case of logical operators, it is either a copy/paste error and therefore a bug, or it is simply wasted code, and should be simplified. In the case of bitwise operators and most binary mathematical operators, having the same value on both sides of an operator yields predictable results, and should be simplified.

Noncompliant Code Example

```
if ( a == a ) { // always true
  doZ();
}
```

Feature Flags

ShowBoxHome Show the home center box.

The screenshot shows the "Account settings" page. On the left, a sidebar menu includes "Feature flags" (selected), "Users", "Metrics", "Debugger", "Audit log", "Quickstart", "Documentation", "Integrations", and "Account settings" (marked with a red circle containing the number 1). The main content area is titled "Account settings" and contains a navigation bar with "Projects", "Team", "Roles", "Authorization", "Billing", "Usage", "Security", "Profile", and "History". Below this, a section titled "Your projects" shows a list with one item: "demoBook demo-book" (marked with a red circle containing the number 3). To the right of the list are buttons for "NEW PROJECT +", "EDIT", and "NEW ENVIRONMENT +". The list table shows two environments: "Production" (marked with a red circle containing the number 2) and "Test". Each environment row includes columns for "TTL", "SDK key", "Mobile key", and "Client-side ID", with "EDIT" buttons for each.

Environment	TTL	SDK key	Mobile key	Client-side ID
Production	0 minute TTL	SDK key	Mobile key	Client-side ID
Test	0 minute TTL	SDK key	Mobile key	Client-side ID

Chapter 14: DevOps for Open Source Projects

Overview **Repositories** Projects 0 Stars Followers Following

Find a repository... Type: All ▾ Language: All ▾ **New**

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository](#).

Owner Repository name *

 **mikaelkrief** / DemoApp 

Great repository names are short and memorable. Need inspiration? How about `cuddly-memory`?

Description (optional)

Demo for OSS project

Public
 Anyone can see this repository. You choose who can commit.

Private
 You choose who can see and commit to this repository.

Skip this step if you're importing an existing repository.

Initialize this repository with a README
This will let you immediately clone the repository to your computer.

Add .gitignore: None ▾ Add a license: None ▾ 

Create repository

mikaelkrief / **DemoApp**

Code Issues 0 Pull requests 0 Actions Projects 0 Wiki Security Insights Settings

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS <https://github.com/mikaelkrief/DemoApp.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a `README`, `LICENSE`, and `.gitignore`.

...or create a new repository on the command line

```
echo "# DemoApp" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/mikaelkrief/DemoApp.git
git push -u origin master
```

1.30.1 (June 07, 2019)

BUG FIXES:

- Ensuring the authorization header is set for calls to the User Assigned Identity API's (#3613)

1.30.0 (June 07, 2019)

FEATURES:

- **New Data Source:** `azurerm_redis_cache` (#3481)
- **New Data Source:** `azurerm_sql_server` (#3513)
- **New Data Source:** `azurerm_virtual_network_gateway_connection` (#3571)

IMPROVEMENTS:

- dependencies: upgrading to Go 1.12 (#3525)
- dependencies: upgrading the `storage` SDK to `2019-04-01` (#3578)
- Data Source `azurerm_app_service` - support windows containers (#3566)
- Data Source `azurerm_app_service_plan` - support windows containers (#3566)
- `azurerm_api_management` - rename `disable_triple_des_chiphers` to `disable_triple_des_ciphers` (#3539)
- `azurerm_application_gateway` - support for the value `General` in the `rule_group_name` field within the `disabled_rule_group` block (#3533)
- `azurerm_app_service` - support for windows containers (#3566)
- `azurerm_app_service_plan` - support for the `maximum_elastic_worker_count` property (#3547)
- `azurerm_managed_disk` - support for the `create_option` of `Restore` (#3598)
- `azurerm_app_service_plan` - support for windows containers (#3566)

The screenshot shows a GitHub release page for a repository. At the top, there are navigation links: Code, Pull requests (0), Actions, Projects (0), Wiki, Security, Insights, and Settings. Below these, there are two tabs: Releases (selected) and Tags. The main content area displays the 'First Release' by user 'mikaelkrief' (released 9 minutes ago). The release is identified by a green 'Latest release' button and a red box around the blue 'v1.0.0' tag. A 'Verified' badge is also present. The release description states: 'This first release contain:' followed by a bulleted list: '• feature 1' and '• feature 2'. Below the release, there is a section for 'Assets' (3), with three items listed: 'binaries.zip' (highlighted with a red box), 'Source code (zip)' (highlighted with a green box), and 'Source code (tar.gz)'. The entire screenshot is framed by a red border.

The screenshot shows the Travis CI homepage. At the top, there is a navigation bar with links: About Us, Blog, Status, Documentation, Help, and a 'Sign in with GitHub' button, which is highlighted with a red box. The main content area features the Travis CI logo and a large green button labeled 'Start Free Trial'.

This screenshot shows the user profile page for Mikael. At the top, there are links for Documentation and Help, and a user icon. A dropdown menu for Mikael is open, showing the name "Mikael", a "Settings" option with a red notification badge containing the number "1", and a "Sign Out" option. Below the profile, there are tabs for "Repositories" (which is selected) and "Settings". A message states that only public repositories are shown, with a link to private projects on travis-ci.com. Below this, a section for "Legacy Services Integration" shows a repository named "learning" with a sub-project "Learning_DevOps". The "Learning_DevOps" project has a green "Settings" button with a red notification badge containing the number "3".

Features

Wikis

GitHub Wikis is a simple way to let others contribute content. Any GitHub user can create and edit pages to use for documentation, examples, support, or anything you wish.

Restrict editing to collaborators only

Public wikis will still be readable by everyone.

Issues ✓

Issues integrate lightweight task tracking into your repository. Keep projects on track with issue labels and milestones, and reference them in commit messages.

Get organized with issue templates

Give contributors issue templates that help you cut through the noise and help them push your project forward.

CVE-2019-11358 - Medium Severity Vulnerability

▼ Vulnerable Libraries - jquery-3.3.1.min.js, jquery-3.3.1.js

▶ jquery-3.3.1.min.js

▶ jquery-3.3.1.js

Found in HEAD commit: [64bf284ae4358b2a0bb8e5d7cf619e0050cb8ab0](#)

▼ Vulnerability Details

jQuery before 3.4.0, as used in Drupal, Backdrop CMS, and other products, mishandles `jQuery.extend(true, {}, ...)` because of `Object.prototype` pollution. If an unsanitized source object contained an enumerable `proto` property, it could extend the native `Object.prototype`.
